## Andorra's anti-dumping measures on energy storage products

How many anti-dumping measures are there in the EU?

By mid-2025, 113 definitive anti-dumping measures are in force in the EU. Currently, 66 anti-dumping (and anti-subsidy) investigations are ongoing in various sectors. In a large number of cases, the subject of an anti-dumping investigation concerns raw materials or semi-finished products.

What if dumping harms the European industry?

In the event of dumping that harms the European industry, the Commission may impose remedies. In doing so, the Commission must demonstrate that EU companies that produce the same product have suffered material harm and that the anti-dumping measure is not against the interest of the Union.

What is an anti-dumping investigation?

Anti-dumping investigations are an important tool of the European Commission ("Commission") to ensure fair competition in the European single market. If certain products are dumped, the Commission may impose anti-dumping duties on imports of these products. Dumping occurs when products are exported to Europe at artificially low prices.

What are the final outcomes of an anti-dumping investigation?

An anti-dumping investigation by the Commission may have four possible final outcomes: the Commission imposes a definitive anti-dumping duty. Past investigations have shown that in 74% of cases an investigation results in measures being taken. An anti-dumping duty imposed may not exceed the dumping margin established.

Aerial view of the land where the solar plants will be built with the Andorra thermal power plant in the background. Image: Endesa. Spanish and Portuguese utility Endesa, part of Enel, has ...

European households now install enough battery storage every 3 hours to power a mid-sized village for a day. But behind this green revolution lurks a trade drama worthy of a Netflix ...
