What causes tripped circuit breakers & blown fuses?

One common cause of tripped circuit breakers and blown fuses is an overloaded circuit, often caused by plugging in too many electrical appliances. This happens when too many devices or appliances are plugged into a single circuit, causing it to draw more current than it can safely handle.

How do you fix a blown fuse in a circuit breaker?

When it comes to replacing a blown fuse in your circuit breaker, safety should always be the number one priority. Here are some key precautions you should take before attempting to fix the issue:

- Turn off the power: Before doing anything, make sure to turn off the power supply to the circuit breaker.

Can a blown fuse be switched back on?

Unlike a circuit breaker, a blown fuse can't be switched back on. To fix it, you will need to replace the fuse with one of the same amperage rating (more on this below).
