# How to install most solar energy storage containers

How can I store solar energy?

You can store the converted solar energy in a BATTERY. Follow the connections in the circuit diagram as you assemble your solar system in an OUTDOOR WORKSHOP. Solar Energy is a Green Energy,a Renewable Source of Energy, and it's good for our planet. The energy is stored in the battery and as long as the sun shines, your system will be powered.

Can you put solar panels on a container?

We put solar panels on a container for a guy who was powering an RV on his land. He had a generator, and the container was full of batteries to support himself. When we're on top of a container, we need to build a custom racking system to hold up more than one row of panels, which is what we ended up doing for him. (See in image with tan container.)

Should I add a battery to my solar system?

The approach depends entirely on your current equipment. If your existing solar system works well, AC-coupled battery addition offers the simplest upgrade path. This approach installs a separate battery inverter alongside your existing solar inverter, allowing both systems to operate independently.

Why should you invest in a solar battery system?

A properly sized battery system captures your cheap solar power and deploys it when grid electricity peaks at \$0.40+ per kWh. The average solar battery system pays for itself in 7-12 years through energy savings alone, not counting the value of backup power during outages. Maximizing your solar investment represents another crucial advantage.
