
Offshore VHF communication green base station

What is a VHF base station?

A VHF (Very High Frequency) base station is a fixed communication device that operates within the 30 MHz to 300 MHz frequency range. Known for their superior range and clarity in open environments, VHF base stations are ideal for applications that require communication across vast, unobstructed areas such as rural landscapes, and outdoor events. 1.

Why should you choose belfone VHF base stations?

With over 30 years of expertise in professional communication solutions, BelFone is a trusted provider of VHF base stations designed for superior performance, durability, and flexibility. 1. Cutting-Edge Technology BelFone VHF base stations leverage advanced technologies for enhanced signal clarity, range, and reliability. 2. User-Friendly Design

What is a sailor VHF radio?

Designed to operate in harsh marine environments, the intuitive yet user-friendly radio systems offer a range of features such as SAILOR Replay for message recording and enhanced quality audio. The SAILOR VHF series features a range of terminals from standard workhorse radio, through to DSC, GMDSS and ATEX models.

How does the new VHF radio work?

The new VHF radios come with an option of two receivers and built-in DSC modem for continuous automated supervision of CH70. The transceiver connects with LAN, antenna and power supply. In addition to VoIP and remote-control over IP, the VHF radio allows for local control via optional display and handset.
