## **Solar panels extend beyond the roof**

Can a solar PV system extend beyond a roof edge?

No solar pv systems should extend beyond the edges of the roof. Wind will get underneath and weaken the fixings, leading to a potentially lethal situation. Depending on where you live, different laws exist as to how close solar panels are allowed to be from a roof edge.

Do solar panels extend the life of a roof?

However, this can be avoided by arranging regular maintenance and monitoring of the solar panel and roof. On the other hand, solar panels have actually been known to extend the life of a roof because they act as an extra layer of protection against the elements. 5.

How close can solar panels be from a roof edge?

Wind will get underneath and weaken the fixings, leading to a potentially lethal situation. Depending on where you live, different laws exist as to how close solar panels are allowed to be from a roof edge. Of course, those in cyclone areas have the strictest laws, and are not allowed to be any closer than 1 metre from the edge or apex of a roof.

Do solar panels need roof clearance?

Roof clearance There are two reasons solar panels need to have a decent roof clearance (height suspended above the roofing material). The first is so that the installer can reach underneath during installation to secure the wiring to the rails underneath.
