Why do air conditioners turn yellow?

Yellowing is a very common occurrence in ageing air-conditioners. But what causes them to turn yellow? The main reason would be oxidation, be it from exposure to UV rays, heat, or even sulfurization from air pollutants. These would make fundamental changes within the molecular structure of the plastic which eventually results in yellowing.

Why is my AC plastic turning yellow?

The yellowing of your AC's plastic happens due to a process called UV degradation. When exposed to UV, the synthetic polymers undergo a chemical reaction that causes the white plastic to turn yellow over time. In fact, exposure to any kind of light, oils, and water can cause your AC's plastic to tarnish. Other possible causes could be:

Why does plastic turn yellow?

The main reason would be oxidation, be it from exposure to UV rays, heat, or even sulfurization from air pollutants. These would make fundamental changes within the molecular structure of the plastic which eventually results in yellowing. Once the plastic has turned yellow, it is not possible to reverse the process.

Can a yellow air conditioner be reversed?

Once the plastic has turned yellow, it is not possible to reverse the process. Therefore, if you wish to avoid the yellowing process, do keep your air-conditioners away from UV exposure, especially if sunlight enters through a window during the day.
